EDUCATION

Northeastern University

Boston, MA

Candidate for B.S in Computer Science

May 2028

Concentration: Software Development

GPA: 3.95

Relevant Coursework: Object-Oriented Design, Computer Systems, Intro to Databases, Fundamentals of Computer Science 1 & 2, Discrete Structures, Intro to Math Reasoning, Tech and Human Values

Activities/Interests: Treasurer of NU Run Club (5k's, 8k's, Half Marathon, Marathon) and Intramural Flag Football

Honors: Dean's List (2024, 2025, 2026)

TECHNICAL KNOWLEDGE

Languages: Java, Kotlin, SQL, C, Assembly, Python, CSS 3, HTML 5, Racket, Typescript

Frameworks and Libraries: Flask, StreamLit, Pandas, Numpy, JUnit, Maven, Espresso, Playwright

Technologies: GitHub, MySQL, Docker, Eclipse, IntelliJ, Android Studio, VS Code, Git, DataGrip, Jira, CircleCI, X-ray

PROJECT EXPERIENCE

EuroTour: *Team Member*

May 2025- June 2025

- Designed a full-stack web application with **MySQL** database schema, **Flask APIs**, and seamless frontend-backend integration
- Developed an interactive **Streamlit** dashboard for live tourism data visualization and machine learning prediction results
- Implemented a machine learning framework using **time series** analysis to predict tourist volume and **recommender models** to generate destination recommendations

Power Line: *Creator*

April 2025 - May 2025

- Built a **Java-based** power line game using **Kruskal's MST** and **BFS algorithms** for power distribution
- Implemented union-find data structures and **HashMap** optimization for clean code
- Utilized **dynamic dispatch** through polymorphic method overriding and interface implementation for rendering and event handling systems

Connections: *Creator*

March 2025- April 2025

- Built a **Java** implementation of the NYT Connections puzzle with scalable **randomization algorithms** for word shuffling and positioning using Java inheritance
- Implemented state management with mouse events, collision detection, and performance optimization
- Maintained **clean, concise, and testable** code using Java's Tester library and the debugging tools from **Eclipse**

WORK EXPERIENCE

Bevi

Boston, MA

Software Engineer In Test Co-op

January 2026 - September 2026

- Developed a **CircleCI** job that builds a single APK and distributes it across various **Android emulators**, running unique suites of tests depending on the branch — eliminating local test runs and catching failures long before formal regression cycles begin.
- Built multiple Android UI test automation suites in **Kotlin** using **Espresso**, applying OOP principles such as abstraction and the **Page Object Model** to write maintainable, scalable tests that achieve full functional coverage, cutting days off QA regression testing.
- Leveraged Jira and X-Ray to author both manual and **automated** test cases, maintaining coverage for functionality that cannot be automated while feeding automated suites directly from documented test steps
- Collaborated with developers and product stakeholders to establish definition of ready and acceptance criteria for new features, creating and **triaging bug tickets** in Jira to track issues through resolution.
